

Friday 06 November 2020 – Afternoon

GCSE (9-1) in Psychology

J203/02 Studies and applications in psychology 2

Time allowed: 1 hour 30 minutes

You must have: • a scientific or graphical calculator

Please write clearly in black ink. Do not write in the barcodes.							
Centre number					Candidate number		
First name(s)	'						
Last name							

INSTRUCTIONS

- Use black ink. You can use an HB pencil, but only for graphs and diagrams.
- Answer all the questions.
- Write your answer to each question in the space provided. If you need extra space use the lined pages at the end of this booklet. The question numbers must be clearly shown.

INFORMATION

- The total mark for this paper is 90.
- The marks for each question are shown in brackets [].
- Quality of extended response will be assessed in questions marked with an asterisk (*).
- This document has 20 pages.

ADVICE

· Read each question carefully before you start your answer.

Section A

Memory

Answer **all** questions in this section.

1	(a)		ntify the research method used in Wilson, Kopelman & Kapur's (2008) study into promir persistent loss of past awareness in amnesia.	nent
		Α	case study	
		В	natural experiment	
		С	observation	
		D	self-report	
		You	r answer	[1]
	(b)	Ider	ntify the type of brain scans used in Wilson, Kopelman & Kapur's (2008) study.	
		Α	СТ	
		В	EEG	
		С	MRI	
		D	PET	
		You	r answer	[1]
	(c)	lder	ntify which of the following is a criticism of Wilson, Kopelman & Kapur's (2008) study.	
		Α	low application	
		В	low construct validity	
		С	low ecological validity	
		D	low generalisability	
		You	r answer	[1]

- 2 Yasmin and David are revising together. Yasmin has tried revising before but cannot seem to remember the information. David has studied the Multi-store Model of Memory and uses this to make some suggestions to help Yasmin, including:
 - that she is trying to put too much information into her memory;
 - that she should try repeating the information she is trying to learn;
 - that she should try thinking about the meanings of the information.

Using t	the source:
---------	-------------

	(a)	Identify the suggestion that refers to capacity of short-term memory.	
			[1]
	(b)	Suggest one way in which Yasmin could increase the capacity of her short-term memory.	
			[1]
	(c)	Using the Multi-store Model of Memory;	
		Describe how information will transfer from Yasmin's short-term to long-term memory.	
			[2]
3	Ev.	Justo the Multi store Medal of Memory	
3	⊏Va	lluate the Multi-store Model of Memory.

4	Amnesia is a condition w	hich affects a perso	on's memory.		
	Draw a line to match each	h type of amnesia	to its correct definition.		[2]
	Type of amnesia		Definition		
			Difficulty in rem	embering how to do thing	S
	Anterograde amnesia	ì			
			Difficulty in recall	ling memories from the pa	ast
	Retrograde amnesia				
			Difficulty in	forming new memories	
5	Complete the following p	assage about the r	ole of neuropsychology	in amnesia.	
	You must choose a differ	ent part of the brain	n for each gap from the I	ist below.	[3]
	cerebellum	frontal lobe	hypothalamus	hippocampus	
	The part of the brain a	ssociated with ant	erograde amnesia is th	ne	
	This is because informa	tion from the short	t-term memory needs to	pass through here to re	each
	the long-term memory.	Damage to the	i	is associated with retrog	rade
	amnesia. Procedural me	mories, like knowin	g how to drive a car or p	play a musical instrument,	, can
	be affected by damage to	the			

6 A psychologist investigated reconstructive memory. He gave a group of participants some text to read and then asked them to recall what they could remember. He then calculated the number of errors shaped by experience and expectations.

Table showing the number of errors made by ten participants.

Errors shaped by prior experiences	12
Errors shaped by expectations	30

Using the source:

	(a)	Suggest one way in which memories can be reconstructed, other than by prior experience expectation.	or
		[1]
	(b)	Calculate the fraction of errors shaped by prior experiences to errors shaped by expectation simplified to its lowest form. Show your workings.	s,
		[3]
7	Des	scribe one criticism of the Theory of Reconstructive Memory.	
			••
			••
		[i	2]
8		scribe one way in which the development of neuropsychology has contributed to measuring tendered to measuring the memory functions.	ıg

Section B

Sleep and Dreaming

Answer **all** questions in this section.

9	(a)		ntify which of the following represents the actual subject matter of dreams according to tudian Theory of Dreaming.	he
		A	latent content	
		В	manifest content	
		С	repression	
		D You	wish fulfilment r answer	[1]
	(b)	lder	ntify what the process of repression means in relation to the Freudian Theory of Dreamin	າg.
		Α	pushing pleasant thoughts and experiences in to the conscious	
		В	pushing pleasant thoughts and experiences in to the unconscious	
		С	pushing unpleasant thoughts and experiences in to the conscious	
		D	pushing unpleasant thoughts and experiences in to the unconscious	
		You	r answer	[1]
	(c)		ntify which of the following is a criticism relating to the validity of the Freudian Theory aming.	of
		Α	it ignores determinism	
		В	it is overly scientific	
		С	it is subjective	
		D	it is too reductionist	
		You	r answer	[1]

10 Adeline has difficulty sleeping, so she stays awake playing computer games until late at night to try and tire herself out. But instead she just finds it harder to get to sleep. Adeline shares a room with her sister who sometimes snores, this often wakes her during the night. Adeline kept a diary for a week noting how long she played computer games until she settled to sleep.

Table showing how long Adeline played computer games before she settled to sleep.

Day	Length of time (in minutes) before sleeping
Sunday	96
Monday	121
Tuesday	87
Wednesday	42
Thursday	12
Friday	38
Saturday	60

Using the source:

• • • • • • • • • • • • • • • • • • • •	.g coaca	
(a)	Identify one cause of Adeline's sleep onset insomnia.	
(h)	Identify one cause of Adeline's sleep maintenance insomnia.	[1]
(2)		[1]
(c)	Identify the day which Adeline took the longest to settle to sleep.	
		[1]
(d)	Calculate, as a percentage of the week, the length of time Adeline took before she settled sleep on Sunday. Express your answer to two decimal places. Show your workings.	to
		[3]
(e)	Explain one benefit of sleep to Adeline.	
		[2]

	(1)	sleep hygiene. She decides to use open questions.
		Give one open question that Adeline could include in her questionnaire.
		[2]
11	Out	line the role of melatonin in sleep.
		[2]
12	Out	line the role of neuropsychology in the Activation Synthesis Theory of Dreaming.
		[3]

•	Evaluate the Activation Synthesis Theory of Dreaming.
	161

Section C

Social Influence

Answer **all** questions in this section.

14	(a)		ntify where Bickman's (1974) first experiment in the study into obedience and the socret of a uniform took place.	cial
		Α	Chicago	
		В	Houston	
		С	New Orleans	
		D	New York	
		You	r answer	[1]
	(b)	lder	ntify the sampling method Bickman (1974) used in his first experiment.	
		Α	opportunity	
		В	random	
		С	stratified	
		D	volunteer	
		You	r answer	[1]
	(c)	lder	ntify the correct uniforms worn by the experimenters in Bickman's (1974) first experime	nt.
		Α	civilian, milkman, policeman	
		В	civilian, bus driver, guard	
		С	civilian, milkman, guard	
		D	civilian, bus driver, policeman	
		You	r answer	[1]

5	Describe one way culture may influence pro-social behaviour.						
	[2]						
6	Amelia, Henry and Oliver are all playing a game. Amelia and Henry have both played the game before, but Oliver has not. Amelia explains the rules to both Henry and Oliver. As Oliver has never played the game before, he accepts Amelia's rules. Henry is positive Amelia's rules are incorrect but she tells him to go along with them so the game can start. Henry wins the game.						
	Using the source:						
	(a) Identify the child who is showing conformity.						
	[1]						
	(b) Identify the child who is showing obedience.						
	[1]						
7	Explain how conformity and crowd behaviour are different.						
•	Explain flow comornity and crowd behaviour are different.						
	[2]						
8	Mohammed and Jordana want to raise awareness of mental health at their youth club. They are unsure how to achieve this. The manager of the youth club says 'even a minority can influence attitudes towards mental health stigma and discrimination'.						
	Explain one way in which minority influence could be used to help reduce mental health stigma and discrimination. You must refer to the source in your answer.						
	[2]						

19*	Use your knowledge and understanding from across the psychology course to explain how far your agree with the following statement.					
	"Quantitative data is more useful than qualitative data."					
	In your answer, you should refer to Bickman's (1974) study into obedience and the social power of a uniform and at least one other study from a different area of psychology you have studied. [13]					

Section D

Research Methods

Answer **all** questions in this section.

A psychologist investigated whether wearing protective headgear influenced risk taking behaviour.

He gathered a sample of 30 participants from his workplace using self-selected sampling. He divided them into three groups of ten; group one was given a baseball cap to wear, group two was given a protective cycle helmet to wear and group three did not wear any headgear. All three groups were asked to play a risk-taking computer game. Each participant played the game 10 times and the total percentage of risk-taking behaviour was calculated. A greater percentage indicated more risk-taking behaviour.

The results are shown in the table below.

Table to show the percentage of risk-taking behaviour by group

Group (headgear type)	Percentage of risk-taking behaviour
Protective cycle helmet	17%
Baseball cap	13%
No headgear	12%

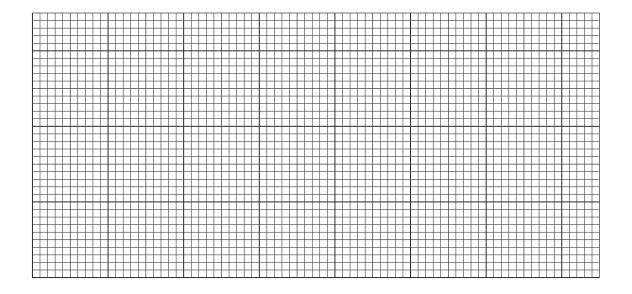

20	Identify which of the following is a suitable alternative hypothesis for this study.	
	Tick one box to show your answer.	
	There will be no difference in the risk-taking behaviour between participants wearing a baseball cap, protective cycle helmet or no headgear.	
	There will be a significant relationship between the risk-taking behaviour and wearing a protective cycle helmet, a baseball cap or no headgear.	
	There will be a significant difference in the risk-taking behaviour of participants wearing a protective cycle helmet and those wearing a baseball cap or no headgear.	[1]

21	rne	e psychologist gathered the 30 participants using self-selected sampling.	
	(a)	Outline how the psychologist could have used self-selected sampling in this study.	
	(b)	Outline one strength of using self-selected sampling in this study.	. [2]
			. [2]
22	Exp	lain one way in which the findings in the source may lack validity.	
23	Ехр	periments are often internally reliable.	
	Exp	lain how the psychologist could achieve internal reliability in this study.	
			. [4]

24	The	psyc	chologist	in th	ne s	our	ce c	ollected	prir	na	ry	da	ta.	
	_													

Explain one strongth of collecting primary data in this study.
[2]

25 Draw an appropriate graph to display the data from the table on page 14.

[3]

26	Using	the	source:
----	-------	-----	---------

xplain two conclusions from the results of this study.	
	[2
	[2
