AS CHEMISTRY

Paper 1 Inorganic and Physical Chemistry

Tuesday 16 May 2023

Morning

Time allowed: 1 hour 30 minutes

Materials

For this paper you must have:

- the Periodic Table/Data Sheet, provided as an insert (enclosed)
- a ruler with millimetre measurements
- a scientific calculator, which you are expected to use where appropriate.

Instructions

- Use black ink or black ball-point pen.
- Fill in the boxes at the top of this page.
- Answer all questions.
- You must answer the questions in the spaces provided. Do **not** write outside the box around each page or on blank pages.
- If you need extra space for your answer(s), use the lined pages at the end of this book. Write the question number against your answer(s).
- · All working must be shown.
- Do all rough work in this book. Cross through any work you do not want to be marked.

| Question | Mark |
|-----------|------|
| | |
| 1 | |
| 2 | |
| 3 | |
| 4 | |
| 5 | |
| 6 | |
| 7 | |
| 8 | |
| Section B | |
| TOTAL | |

Information

- The marks for questions are shown in brackets.
- The maximum mark for this paper is 80.

Advice

You are advised to spend about 65 minutes on Section A and 25 minutes on Section B.

| Do not | write |

| outside | e the |
| ho | v |

Section A

Answer all questions in this section.

| 0 | 1 | This question is about the elements in Period 3. |
|---|---|--|
|---|---|--|

0 1. Give the full electron configuration of the element in Period 3 with the highest first ionisation energy.

[1 mark]

0 1. **2** Give an equation, including state symbols, to represent the process that occurs when the second ionisation energy of sodium is measured.

[1 mark]

0 1. 3 Table 1 shows some successive ionisation energies for an element in Period 3.

Table 1

| Ionisation number | 1 | 2 | 3 | 4 | 5 | 6 | 7 | 8 |
|--|------|------|------|------|------|------|-------|--------|
| lonisation energy / kJ mol ⁻¹ | 1000 | 2260 | 3390 | 4540 | 6990 | 8490 | 27100 | 31 700 |

Identify the Period 3 element.

Explain your answer.

Element

| | % abundance ⁸⁶ Sr = |

0 2 . 6

Mg(OH)₂ is used as an antacid to treat indigestion.

A student does an experiment to determine the percentage by mass of Mg(OH)2 in an indigestion tablet.

40.0 cm³ of 0.200 mol dm⁻³ HCI (an excess) is added to 0.200 g of a powdered tablet. The mixture is swirled thoroughly.

All of the Mg(OH)₂ reacts with HCl as shown.

$$Mg(OH)_2 + 2HCI \rightarrow MgCI_2 + 2H_2O$$

The amount of HCI remaining after this reaction is determined by titration with 0.100 mol dm⁻³ NaOH

29.25 cm³ of 0.100 mol dm⁻³ NaOH are needed.

Calculate the percentage by mass of Mg(OH)₂ in the indigestion tablet.

[6 marks]

Percentage by mass

This question is about time of flight (TOF) mass spectrometry.

0 7 . 1

Compound ${\bf X}$ is dissolved in a polar, volatile solvent and is ionised by electrospray ionisation.

Each ion is accelerated so that it has a kinetic energy of $1.36 \times 10^{-16} \, \mathrm{J}$

The kinetic energy of an ion is given by the equation $KE = \frac{1}{2}mv^2$ where:

KE = kinetic energy / J m = mass / kg v = speed / m s⁻¹

The time of flight along the 0.750 m flight tube is 2.48×10^{-5} s

Determine the mass, in g, of one mole of X.

The Avogadro constant, $L = 6.022 \times 10^{23} \text{ mol}^{-1}$

[5 marks]

Mass of one mole of **X**

Section B

Answer all questions in this section.

Only **one** answer per question is allowed.

For each question completely fill in the circle alongside the appropriate answer.

CORRECT METHOD

WRONG METHODS

If you want to change your answer you must cross out your original answer as shown.

If you wish to return to an answer previously crossed out, ring the answer you now wish to select as shown.

You may do your working in the blank space around each question but this will not be marked. Do not use additional sheets for this working.

0 9 Which atom contains the most neutrons?

[1 mark]

- A 54Cr
- **B** 55Mn
- C 57Fe
- **D** 58Ni

| | Use this information for Questions 10 and 11. |
|-----|--|
| | A student completes a titration to determine the concentration of ethanoic acid in vinegar. |
| | 25.0 cm³ of vinegar are transferred to a conical flask using a pipette. A few drops of phenolphthalein are added to the conical flask. Sodium hydroxide solution is added from a burette to the conical flask. The titration is repeated until concordant results are obtained. |
| 1 0 | Which suggestion improves the accuracy of the titres? [1 mark] |
| | A Rinsing the conical flask with vinegar between each titration. |
| | B Rinsing the conical flask with sodium hydroxide solution between each titration. |
| | C Rinsing the conical flask with water between each titration. |
| | D Not rinsing the conical flask between each titration. |
| 1 1 | Which suggestion decreases the percentage uncertainty in the mean titre? [1 mark] |
| | A Use a more dilute solution of sodium hydroxide in the burette. |
| | B Use a more dilute solution of vinegar. |
| | c Rinse the inside of the conical flask with distilled water during each titration. |
| | D Rinse the tip of the burette with distilled water near the end point in each titration. |
| 1 2 | Which reaction has the highest percentage atom economy for the production of hydrogen? [1 mark] |
| | |
| | A LiH + $H_2O \rightarrow LiOH + H_2$ |
| | $B CO + H_2O \rightarrow CO_2 + H_2 $ |
| | $\mathbf{C} \ 2 AI \ + \ 3 H_2 O \ \rightarrow \ AI_2 O_3 \ + \ 3 H_2 \qquad \boxed{\bigcirc}$ |
